Question 1

Revisit Later

How to Attempt?

Get Code Through Strings - 1: Farah is one of the few associates in Global Safe Lockers Corp Limited, who has access to the company's exclusive locker that holds confidential information related to her division. The PIN to the locker gets changed every two days. Farah receives the PIN in the form of a string which she needs to decode to get the single-digit numeric PIN.

The numeric PIN can be obtained by adding the lengths of each word of the string to get the total length, and then continuously adding the digits of the total length till we get a single digit.

For example, if the string is "Wipro Technologies", the numeric PIN will be 8.

Explanation:

Length of the word "Wipro" = 5
Length of the word "Technologies" = 12
Let us add all the lengths to get the Total Length = 5 + 12 = 17
The Total Length = 17, which is not a single-digit, so now let us continuously add all digits till we get a single digit i.e. 1+7 = 8
Therefore, the single-digit numeric PIN = 8

Farah approaches you to write a program that would generate the single-digit numeric PIN if the string is input into the program. Help Farah by writing the function (method) that takes as input a string **input1** that represents the sentence, and returns the single-digit numeric PIN.

Assumptions: For this assignment, let us assume that the given string will always contain more than one word.

Let's see one more example -

JAVA7

Compiler: Java - 1.7

```
1 import java.io.*;
2 import java.util.*;
3
4 // Read only region start
5 class UserMainCode
6 {
7
8     public int getCodeAtThroughStrings(String input1){
9         // Read only region end
10        // Write code here...
11        String word[]=input1.split(" ");
12        int sum=0;
13        for(int i=0;i<word.length;i++)
14        {
15            sum+=word[i].length();
16        }
17        return(1 + (sum-1) %9);
18    }
19 }
```
